EXPERIENCE

Software Engineer

April 2019 – Present

Liquid Enterprises B.V. (Team Liquid)

Remote

- Optimized and identified performance bottlenecks in the official Liquipedia API, such as slow database queries, and made it up to **20x** faster.
- Implemented **OAuth 2.0** authentication flow to enable secure third-party login, improving user onboarding
- Modified the whole website's codebase to support the new MediaWiki version
- Integrated various game APIs into Liquipedia to make it easier for contributors to input scores/data related to tournaments/players
- Designed and deployed a **Fantasy Bracket Contest** tool which rewarded users if they predicted correct results for particular tournament matches.
- Implemented an **Achievements** System for Liquipedia which awarded users on the basis of edits they do on the wiki
- Implemented a **URL shortener** service that shortens URLs exceeding a specified length.
- Maintained a continuous integration and deployment process using **GitLab** to ensure that the application is always up-to date-and stable

PROJECTS

EaseQuiz | *Swift, XCode, Cursor*

Jan 2025 – Present

- Developed an iOS application using Cursor, an AI Code Editor.
- Converts any data, PDF, Photo or Text into interactive quizzes blazingly fast
- Published the app to the App Store, 300+ users now

SubsManager (subsmanager.com) | *Cursor, NextJs, Tailwind, Vercel, Git*

Nov 2024 – Present

- Developed a subscription management website where users can manage their online subscriptions like Netflix, Spotify etc.
- Get reminded when to cancel certain subscriptions or reminder on when you are getting charged.
- You can also cancel or get new subscription based on the start/end date of your favorite TV show.

Guzz (guzz.in) | *Cursor, NextJs, Tailwind, Vercel, Git*

Nov 2024 – Present

- Developed a combined RSS Feed for gaming related news.
- Currently only have specific gaming portals like IGN, PC Gamer, Polygon etc.
